

eXpresso, Amazon, Microsoft Deemed Most “Innovative”

PC World Magazine Selects Best 2008 Trend-Setting Products

MENLO PARK, CA – (December 28, 2007) *PC World*, the most widely-read computer / business magazine, has selected eXpresso Corporation for its “The 2008 PC World 25 Most Innovative Products Award”. After just four months on the market, eXpresso joins fellow 2008 winners Google, Apple (for iPhone), Facebook and 21 other winners who will be honored for their achievements at the International CES in January.

The eXpresso service hosts Excel business communities where users can store, edit, or instantly share Excel spreadsheets in real time. Although consumers and students are welcome to use eXpresso, the service was developed for the 150 million business users of Excel who need to share spreadsheets everyday. eXpresso extends one of the most popular, pervasive desktop applications on the globe to the Web 2.0 world where users have come to expect interaction with current, “live” data.

George Langan, eXpresso CEO, says *“We knew eXpresso was the right offering at the right time. But with our initial roll-out just in mid-August, there was no expectation the acceptance would explode like this.”*

The 2008 PC World 25 Most Innovative Products Award recognizes both benchmark and breakthrough products that set the standard for innovation with unique qualities that distinguish them from the pack. *PC World’s* editors compared many hundreds of products before narrowing the field to the 25 winners.

“These are among the most inventive and trend-setting products available, breaking the traditional boundaries while pushing the limits of technology,” stated Harry McCracken, VP/editor-in-chief of *PC World*. *“These winners help define industry standards and raise the bar for creativity in the future. Congratulations to eXpresso.”*

Huy Nguyen, CIO, Chief Scientist, and technical wizard behind the eXpresso breakthrough explains, *“eXpresso empowers people who use Excel spreadsheets with the capability to produce a work product through true real-time interaction and centrally accessible data. The days of wasting time by exchanging email attachments that soon become obsolete “file clutter” is over. People who use eXpresso just once instantly realize they just stepped into the next generation of community interaction and information control.*
